

abichina Desktop Connectors:

abichina offers an extensive range of Desktop Connectors for use in desks and floor cavities. Connectors are all "push in" (above & below) for quick & sample installation.

Standard Connector designs are available, and your custom designs are welcomed

Operation is very simple; a simple push in the center of the top panel will open the panel & the next push will then lock it closed. The operation is controlled by a hydraulic spring.

Power sockets are available as a Universal socket, or as approved sockets for specific countries.

Simply use the template supplied to cut out the cavity, insert the Desktop Box and secure with 2 screws & plate, supplied with the unit.
