

abi L Series Touchframe

INTERACTIVE TOUCHFRAME INCL PCB & GLASS

L Series Touchframe

AbiChina can now offer the latest IR PCB technology as completed Touchframe, ready to build into Kiosks, Cabinets and LCD framing. This is ideal for companies who want to use their own product designs or minimise import duty by importing components to assemble touch products in their own country.

The frames are robust but lightweight, and easy to attach because of the aluminium frame design. They offer the latest IR technology with a very fast response to finger touch. For Windows 7 users, connection is "plug-n-play" - custom software drivers are not required. The touch screens offer multitouch operation, compatible with Windows 7 programs, as well as Gesture Control (Zoom, Page scroll, etc).

The frames are supplied in popular sizes, including 4mm safety glass if required & PCB ready for installation. Connection to PC is by USB cable included.

Standard Frame sizes:
(Any size to order)

32"	40"
42"	46"
