

Abichina Modular AV Wall Plates

AbiChina's unique wallplate design uses a modular design that allows 3 modules per wallplate, and the modules available include a range of A/V connectors. The wallplate give you total flexibility: combine any connector combination that you require, incorporate VGA connector with standard keystone connectors, or use screw in connectors where wall cavities do not allow the use of terminated cables.

The modules available have:
 # Push in connectors front and rear full module (VGA, HDMI, 3 x RCA)
 # Front push in connectors with rear screw in connectors
 # Module to hold 2 x Keystone Connectors with both side push in connectors
