

abi Portable Mini PA System with DVD & iPod Docking

PA-9520

The modern user features on the latest PA-9520 portable PA system make it a great companion for individuals and small group situations. 40w RMS speaker output gives enough volume for a huge range of situations. Combine features such as built-in UHF microphone, iPod docking station, DVD, CD & SD card slot, and you have a unit with enough versatility for almost any application. Its styling and construction result in an attractive and robust piece of equipment. The perfect PA for so many requirements, it has wireless and wired microphone facilities, music playback, record and mix that can be done at the same time.

The built-in DVD player is compatible with VCD, CD-G, CDR and CD, and the PA-9520 also has an optional SD card that can support memory capacity up to 1GB. The PA-9520 can be powered by mains power or battery (2-3 hours, depending on the functions being used). Recharging of the battery takes 7-10 hours.

The wireless microphone system includes a handheld UHF remote microphone. A headset microphone + lapel microphone, with a beltpack transmitter, is available as an option. Operating frequency range can be manufactured to suit your country requirements, either single frequency or 16 selectable frequencies to avoid potential interference. A second 16PLL UHF receiver module can be fitted if required, enabling the use of 2 microphones at the one time. An additional wired mic can also be connected to the control panel. The voice audio can be given desired loudness priority relative to any background music/audio and the mic can be run to an external amplifier using the Line Out socket.
