

abi PCP77: POCKET PROJECTOR

PROJECTOR / WINDOWS CE 5.0

The **abi PCP77** is the latest development in Pocket Projector technology. In addition to its small size, the PCP77 includes Windows CE 5.0, memory chip & SD Card Slot. The PCP77 can store a presentation that you prepared on your PC and play it at your destination without the need to take your computer. This means you can present with just one convenient pocket sized device!!

The PCP77 can be run for 2 hours on its battery before re-charging, and can project up to a 1.5m (60") image so you can present to a small group. It incorporates its own small speaker, and you can connect a keyboard & mouse if required.

The image quality is remarkably good using an LCoS projection panel, and the LED light source means expensive lamps are a thing of the past!

abi PCP77 FEATURES
