

abi Touch Tablet

INTERACTIVE TABLET / WIRELESS TOUCH

abi TOUCH TABLET is a unique new tablet that enables you to see & operate the PC screen on the tablet., rather than focussing on the interactive whiteboard . This gives the Presenter freedom to move around the room & maintain control.

The **Touch Tablet** can be used as a stand alone virtual interactive whiteboard or used in conjunction with an interactive whiteboard to complement the board. The **Touch Tablet** is a touch screen TFT LCD monitor that is connected to the PC by wireless RF. RF ensures the PC will receive the signal from anywhere in the room.

The **Touch Tablet** comes with its own Interactive software for stand alone use or it can also operate other brand software if used in conjunction with an Interactive Whiteboard. A great partner for your **abi** interactive whiteboard!
